THE SUSTAINABLE LANDSCAPES PARTNERSHIP

A joint initiative of the CGF Forest Positive Coalition and World Business Council for Sustainable Development's Soft Commodities Forum

The World Business Council for Sustainable Development's (WBCSD) Soft Commodities Forum (SCF) and the Forest Positive Coalition of the Consumer Goods Forum (CGF) are inviting key stakeholders to join them in addressing commoditydriven ecosystem conversion in Brazil's Cerrado biome.

Implementing deforestation- and conversion-free (DCF) supply chain practices is a significant effort from the sector, but other incentives are needed to build a forest positive future. To create these incentives, both platforms embarked on a collaboration in 2020 to drive investment in transitioning priority commodityproducing landscapes to forest positive resilient sourcing areas.

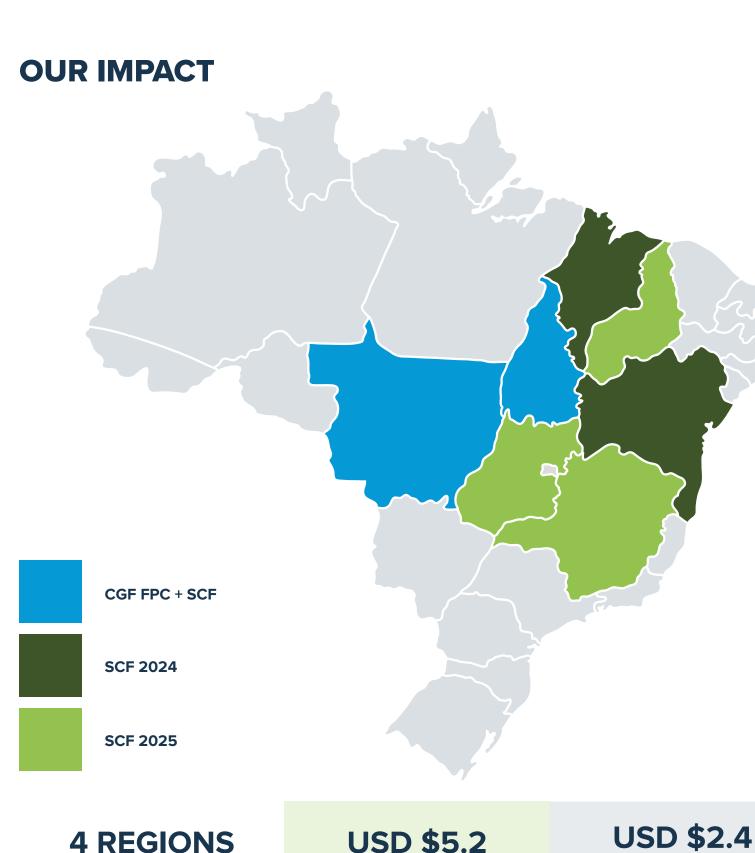

OUR VISION

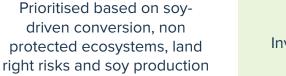

The CGF and SCF believe that successful, effective landscape initiatives in Brazil are essential for advancing regenerative and resilient production regions with positive outcomes for people, nature, climate, and business.

To support this vision, FPC and SCF companies will intensify collaboration in priority Cerrado landscapes by:

Providing capital or in-kind support that contributes to the development and implementation of effective landscape initiatives in priority production regions of Brazil.

Helping to build practical solutions that accelerate the adoption of deforestation- and conversion-free (DCF) practices and optimize social, economic, and environmental outcomes.

Invested in farmer incentives and local sustainable leveraged from donors

A PROOF OF CONCEPT IN WESTERN MATO GROSSO

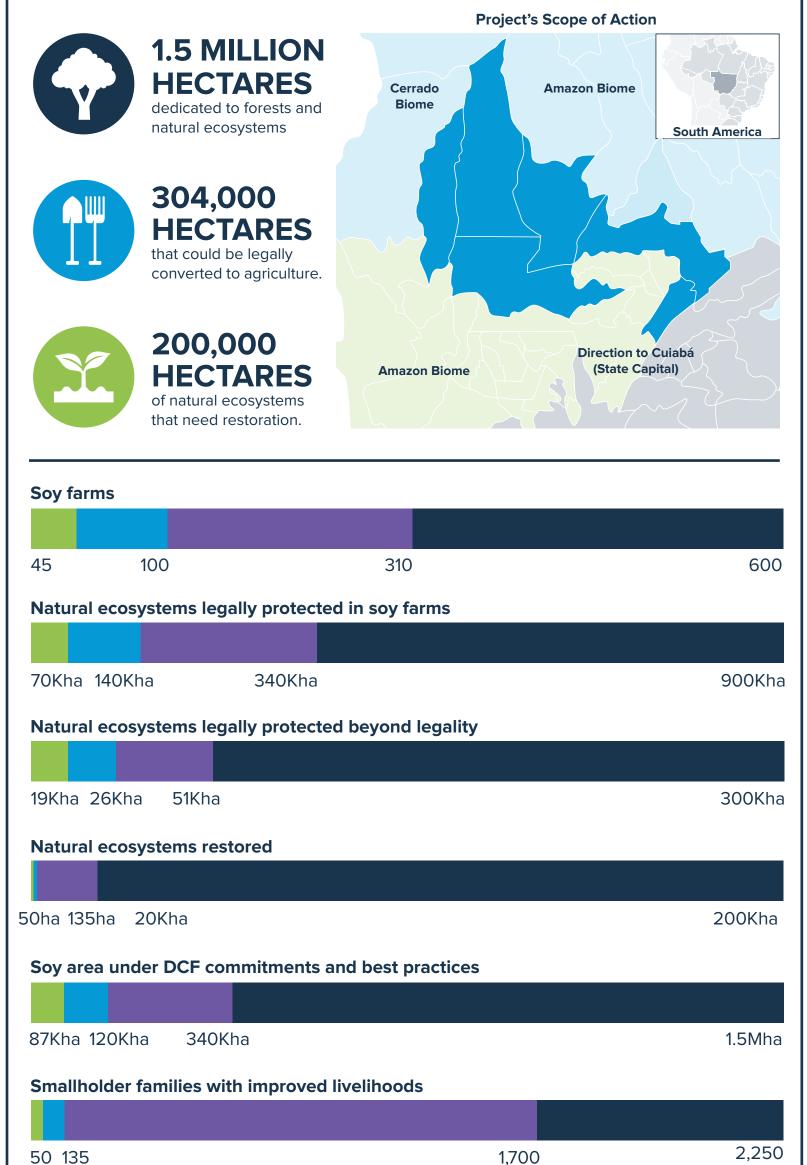

To demonstrate the effectiveness of its model in achieving forest-positive and resilient landscapes, the CGF-SCF partnership has selected Western Mato Grosso (one of the four regions from graphic above) to showcase the tangible benefits that its approach can deliver for people, nature and climate.

In 6 municipalities in Western Mato Grosso, the partnership consists of:

WESTERN MATO GROSSO

Landscape comprises 6 municipalities in an area of 5 million hectares, of which 1.5 million is covered with forests and natural ecosystems. While 304,000 hectares could be legally converted to agriculture, more than 200,000 hectares of natural ecosystems need restoration.

OUR CALL TO ACTION:

The CGF-SCF Landscape Partnership is actively addressing commodity-driven deforestation and ecosystem conversion.

To transition the Cerrado's key landscapes to a forestpositive future, the Partnership is inviting further support and participation from key stakeholders, including:

Supply chain companies of cattle and soy products, can improve resiliency of key producing areas, demonstrating commitment to invest beyond their value chains to deliver benefits associated with improving livelihoods, conserving and restoring forests and connected biodiversity, water and carbon

Input Companies, who have a stake in sustainable soy supply chains, and can meet their climate commitments and supply chain commitments by investing in sustainable productive landscapes

Feed Companies, who count on soy and other commodities in their supply chains, and recognize the importance of nurturing sustainable landscapes as part of their upstream commitments on climate and biodiversity loss

Bilateral and Multilateral Partners, who are interested in catalyzing collective climate mitigation action by scaling up investment in public-private partnerships

Partners from the financial and banking sectors, who have an interest in standing up models that demonstrate the long-term impact of landscape investments on deforestation, climate and biodiversity loss.

Achieving our 2030 targets requires further investment, providing an opportunity to support initiatives with a strong potential to deliver tangible impact and serve as a model for other jurisdictions on how to strike a balance between production, conservation and social inclusion.

JOIN US BY CO-INVESTING AND SUPPORTING OUR LONG-TERM VISION FOR THE BRAZILIAN CERRADO!
